

## **JULY 12, 2018 ROAD CONSTRUCTION UPDATE**

There are a few items to clarify regarding the oil that was placed on a few road surfaces today.

- Stay off the oil as long as possible, BUT it is ok to drive SLOWLY and/or pull over on the oil to avoid traffic.
- Cure time will be slower in very dense parts of the road base, which is why some of the oil has pooled. It's hard to estimate how much time it will take to soak in and cure, but this will be monitored each day by the contractor. If the previously oiled lane is not cured properly the next day, they will delay the other lane to help prevent any problems with the oil
- Tentatively, the 1st layer of chip seal is scheduled for next Wednesday (July 18th)
- Again, drive SLOWLY on all roads under construction, especially areas with oil. High speeds might result in oil splatter.
